Nishil R. Raiyarela
Mobile Application Developer

ON, Canada | +1 416 821-2804 | nishil.raiyarela02@myjobsca.com | LinkedIn | GitHub | Website

SUMMARY

Mobile Application Developer with 4+ years of experience building and maintaining production mobile applications across e-commerce and healthcare environments. Experienced in React Native, Kotlin, Swift, and Flutter, developing scalable features, integrating GraphQL and REST APIs, and improving application performance and reliability. Skilled in CI/CD pipelines, debugging production issues, and implementing secure authentication, delivering stable, high-quality mobile solutions across Android and iOS platforms for enterprise applications.

TECHNICAL SKILLS

Programming Languages: Java, Kotlin, Swift, Dart, JavaScript
Mobile Development: React Native, Flutter, Android SDK, iOS SDK, SwiftUI, Jetpack Compose
API & Integration: REST APIs, GraphQL, JSON, API Integration, Data Synchronization
Databases & Storage: SQLite, Firebase Realtime Database, Local Storage, Caching Strategies
CI/CD & DevOps: GitHub Actions, Fastlane, Jenkins, GitLab CI, Build Automation
Testing & Debugging: JUnit, Appium, Espresso, XCTest, Firebase Crashlytics, Sentry
Security & Authentication: OAuth 2.0, Token-Based Authentication, SSL/TLS
Healthcare Standards: FHIR, HL7, HIPAA
Development Practices: Agile, Scrum, Code Reviews, Sprint Planning

PROFESSIONAL EXPERIENCE

Shopify, ON, Canada **Feb 2025 - Present**
Mobile Application Developer

- Delivered checkout and cart improvements using React Native, Kotlin, and Swift, increasing completed purchases by 18% through simplified flows and reducing drop-offs across multi-step transaction journeys.
- Integrated GraphQL and REST services to support real-time product availability and order tracking, reducing data mismatch issues by 25% across concurrent mobile sessions.
- Reworked rendering logic and state transitions, reducing average screen load time by 30% and improving responsiveness during peak usage periods.
- Set up CI/CD pipelines with GitHub Actions and Fastlane, cutting release turnaround time by 40% and removing manual deployment steps across staging and production environments.
- Analyzed crash patterns using Crashlytics and Sentry, resolving recurring failures and improving crash-free sessions from 96% to 99% across devices and operating system versions.

CitiusTech, India **Jun 2021 - Dec 2023**
Software Developer (Mobile & Cross-Platform)

- Built cross-platform healthcare applications using Flutter and React Native, improving patient engagement by 20% through consistent performance across Android and iOS devices used in clinical workflows.
- Implemented integrations with FHIR APIs and HL7 messaging systems, reducing data exchange errors by 28% while maintaining compliance with healthcare data standards.
- Designed ofline functionality using SQLite and caching strategies, allowing applications to operate during network interruptions and reducing user disruption by 35%.
- Refined request handling and synchronization logic, reducing API response delays by 22% and improving accuracy of patient data across mobile interfaces.
- Introduced automated testing using JUnit and Appium, reducing regression defects by 30% and improving release reliability across multiple deployment cycles.

Cybage Software, India **Sep 2020 - May 2021**
Associate Software Engineer (Mobile Applications)

- Developed Android features using Java and Kotlin, improving interface responsiveness by 15% through better lifecycle handling and structured component design.
- Integrated REST APIs and third-party SDKs, reducing data transfer errors by 20% and improving reliability across multiple application modules.

- Identified and fixed performance bottlenecks, reducing application crash rates by 18% across different Android devices and operating system versions.
- Created unit test cases and supported QA validation, increasing code coverage by 25% and reducing defects in production releases.
- Participated in Agile development cycles, contributing to sprint planning, code reviews, and timely delivery of mobile features aligned with project requirements.

PROJECTS

Internal Hardware SDK Validation Tool

Kotlin • Jetpack Compose • MVVM • Room • Retrofit

- Built an Android application to automate fingerprint enrollment and matching validation across multiple device models, replacing manual QA workflows and improving consistency of SDK testing across different hardware configurations.
- Captured device-level SDK errors and response timings, enabling faster identification of integration issues and reducing dependency on manual debugging during hardware validation cycles.
- Stored test results locally using Room and synced them with backend APIs, allowing tracking of regression issues across firmware versions and improving visibility into SDK performance changes.
- Designed a real-time dashboard using Jetpack Compose to highlight device-specific failures, helping QA teams quickly identify issues and accelerate validation and release readiness processes.

Offline-First Task Manager

Kotlin • Coroutines • Flow • Room • WorkManager • REST

- Developed an Android application supporting ofline-first task management, ensuring uninterrupted usage by persisting data locally and synchronizing with backend services when connectivity became available.
- Implemented background synchronization using WorkManager with retry mechanisms, handling intermittent network failures and maintaining consistent task states across sessions and application restarts.
- Used Kotlin Coroutines and Flow to enable reactive UI updates, ensuring real-time reflection of local and remote data changes without impacting application responsiveness.
- Tested application behavior under simulated network disruptions, validating data integrity and ensuring predictable conflict resolution during synchronization scenarios.

Event Management App

Kotlin • Clean Architecture • SQLite • Android Lifecycle

- Built an Android application supporting event organizers and attendees using Clean Architecture, separating business logic and improving maintainability across multiple application modules.
- Implemented role-based authentication and local data persistence using SQLite, enabling secure access and smooth ofline functionality for different user types within the application.
- Optimized data access patterns and lifecycle handling to reduce cold-start delays and ensure stable performance across various Android devices and operating system versions.

EDUCATION

Software Engineering Technology

Post-Graduate Diploma Centennial College, Toronto, ON

Bachelor of Engineering in Computer Engineering

G H Patel College of Engineering, India
