SUMMARY

Android Developer with 4+ years of experience building and supporting Android applications using Kotlin, Java, Android SDK, and Jetpack Compose across healthcare and e-commerce environments. Skilled in developing mobile UI components, integrating REST APIs, implementing offline storage, debugging production issues, and improving application stability across Android devices. Experienced collaborating within Agile teams delivering scalable mobile applications with foundational exposure to React Native and cross-platform mobile development.

TECHNICAL SKILLS

Programming Languages: Kotlin, Java, JavaScript, Dart

Android Development: Android SDK, Jetpack Compose, XML Layouts, Android Studio, MVVM Architecture, Android Lifecycle Components, Material Design

Mobile Technologies: React Native (Basic), Flutter (Basic), Mobile UI Development, Responsive UI Design

APIs & Integration: REST APIs, Retrofit, JSON Parsing, API Integration, Firebase Services, GraphQL (Basic)

Databases & Offline Storage: Room Database, SQLite, Firebase Realtime Database, Local Data Persistence, Offline Caching

Concurrency & Background Processing: Kotlin Coroutines, Flow, WorkManager

Testing & Debugging: JUnit, Espresso, Firebase Crashlytics, Sentry, Android Debugging, Unit Testing

CI/CD & Tools: Git, GitHub Actions, Jenkins, Fastlane, GitLab CI

Security & Authentication: OAuth 2.0, Token-Based Authentication, SSL/TLS

Development Practices: Agile, Scrum, Code Reviews, Sprint Planning, Bug Fixing, Version Control, Production Support

PROFESSIONAL EXPERIENCE

Mobile Application Developer Shopify

Feb 2025 - Present | ON, Canada

- Developed Android features for checkout, cart, and order management workflows using Kotlin and Android SDK, helping improve transaction completion rates and streamline customer purchase experiences.
- Integrated REST and GraphQL APIs supporting product availability, payment updates, and order tracking functionality, reducing mobile synchronization inconsistencies across Android sessions by 25%.
- Improved Android UI responsiveness by optimizing screen rendering logic, API handling, and lifecycle management, reducing average mobile screen load time by 30%.
- Investigated and resolved Android production crashes using Firebase Crashlytics and Sentry, improving crash-free sessions from 96% to 99% across supported devices.
- Supported CI/CD deployment activities using GitHub Actions and Fastlane, helping improve build reliability and reducing manual deployment dependencies during release cycles.
- Collaborated with backend engineers, QA analysts, and product teams during Agile sprint cycles supporting Android feature releases and production issue resolution activities.
- Assisted with basic React Native feature maintenance and shared mobile component debugging while primarily contributing to Android-native application development tasks.

Android & Mobile Application Developer CitiusTech

Jun 2021 - Dec 2023 | India

- Developed Android healthcare application modules using Kotlin, Android SDK, and MVVM architecture supporting stable mobile workflows across patient and clinical management systems.
- Integrated REST APIs, FHIR services, and healthcare data exchange workflows, reducing synchronization issues by 28% while supporting HIPAA-aligned mobile application requirements.
- Implemented offline storage functionality using Room Database and SQLite, enabling uninterrupted application usage during unstable network conditions and reducing operational disruptions by 35%.
- Improved API request handling and backend synchronization workflows using Retrofit and Coroutines, reducing response delays and improving mobile application responsiveness.
- Built reusable Android UI components using Jetpack Compose and XML layouts, improving maintainability and reducing duplicated development effort across application modules.
- Developed Android SDK wrapper integrations supporting Flutter-based healthcare application showcases for client demonstration requirements, enabling communication between native Android modules and Flutter interfaces.

- Assisted with Flutter platform channel integration and Android-side implementation tasks supporting native feature access, device-level functionality, and backend communication workflows.
- Supported automated testing activities using JUnit and Espresso, improving regression validation coverage and reducing Android release-related production defects.
- Worked closely with QA teams, business analysts, and senior developers within Agile sprint environments supporting Android enhancement delivery and issue resolution timelines.

Associate Android Developer **Cybage Software**

Sep 2020 - May 2021 | India

- Developed Android application features using Java, Kotlin, and Android SDK, improving application responsiveness and supporting stable user experiences across Android devices.
- Integrated REST APIs and third-party SDKs supporting secure mobile data exchange functionality, reducing API-related failures and improving application reliability across multiple modules.
- Identified and fixed Android performance bottlenecks involving lifecycle handling, memory usage, and API processing, reducing crash rates by 18% across supported devices.
- Created unit test cases and participated in QA validation activities, improving code coverage and reducing Android production defects during release cycles.
- Assisted senior developers with debugging activities, feature enhancements, and production support tasks supporting timely Android application delivery within Agile environments.
- Participated in sprint planning sessions, peer code reviews, and collaborative development activities supporting continuous Android application improvements and delivery consistency.

PROJECTS

Storm Chaser Field Companion App

Kotlin • XML • Android SDK • MVVM • Room • Retrofit • Google Maps SDK • Open-Meteo API • Coroutines • LiveData

- Developed a native Android application enabling storm chasers to monitor live weather conditions, review forecast changes, and document field observations across different geographic locations.
- Integrated Open-Meteo weather APIs using Retrofit and Kotlin Coroutines to retrieve real-time weather metrics and location-based 5-day forecast information through Android GPS services.
- Implemented offline storm event logging workflows with camera capture, GPS coordinates, timestamps, FileProvider integration, structured notes, and Room Database persistence supporting offline accessibility.
- Built Google Maps SDK visualization features displaying saved storm observations through coordinate-based Android map markers and location-aware navigation workflows.
- Improved Android application reliability by implementing retry handling, network error state management, pull-to-refresh functionality, structured forecast rendering, and unit-tested weather parsing workflows.

6ixBlock – Toronto-Based Hyperlocal Community Board App

Kotlin • XML • MVVM • Firebase Authentication • Cloud Firestore • Room Database • Google Maps SDK • Fused Location Provider

- Developed a Toronto-based Android community platform supporting location-tagged posts, neighborhood updates, nearby discussions, saved posts, and community-driven engagement workflows.
- Implemented Firebase Authentication and Cloud Firestore-backed real-time features supporting live activity feeds, comments, likes, unread activity tracking, and persistent user profile management workflows.
- Integrated Google Maps SDK and Android location services enabling GTA-based community post discovery through category-based map markers, distance-aware filtering, and location-driven content visibility.
- Built Room Database-backed local caching mechanisms for posts, comments, drafts, and hidden content improving Android application responsiveness, cold-start performance, and offline usability workflows.
- Optimized Android mobile data synchronization and UI responsiveness through MVVM architecture patterns, local persistence handling, structured Firestore query optimization, and lifecycle-aware state management.

EDUCATION

Software Engineering Technology | Post-Graduate Diploma Centennial College, Toronto, ON
Bachelor of Engineering in Computer Engineering | G H Patel College of Engineering, India
